2028_REC_OOPS using Java_Week 10_Q3

Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : COD

1. Problem Statement

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a `TreeMap<Character, Integer>` to count how many times each character appears in the message. Ignores spaces and considers only alphabets (case-sensitive). Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

Input Format

The first line of input contains an integer n, the number of lines in the message.

The next n lines each contain a string (the encrypted message line).

Output Format

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
Hello World
Java

Output: Character Frequency:

H: 1

J: 1

W: 1

a: 2

d: 1

e: 1

l: 3

o: 2

r: 1

v: 1

Answer

```
import java.util.*;
class main{
    public static void main(String args[]){
        Scanner scan = new Scanner(System.in);
        int n=scan.nextInt();
        scan.nextLine();
        TreeMap<Character,Integer> m = new TreeMap<>();
        for(int i=0;i<n;i++){
            String str=scan.nextLine();
            for(char j:str.toCharArray()){
                if (Character.isLetter(j)){
```

```
        m.put(j,m.getDefault(j,0)+1);
    }
}
System.out.println("Character Frequency:");
for(Map.Entry<Character,Integer> entry : m.entrySet()){
    System.out.println(entry.getKey()+" : "+entry.getValue()+" ");
}
}
```

Status : Correct

Marks : 10/10
