Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

A local municipality is implementing an online voting system for a community event and wants to ensure that only eligible voters (those aged 18 or older) can participate.

Your task is to develop a program that validates the age of individuals attempting to vote online. If the user's age is below 18, the program should throw a custom exception, `InvalidAgeException`, preventing them from casting their vote. If the input is invalid, catch the appropriate `InputMismatchException` and print the in-built exception message.

Input Format

The input consists of an integer representing the age.

Output Format

If the age is 18 or older, print "Eligible to vote"

If the age is below 18, print "Exception occurred: InvalidAgeException: Age is not valid to vote"

If there is any other type of exception, print "An error occurred: " followed by the in-built exception message.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 20

Output: Eligible to vote

Answer

```
import java.util.*;
class InvalidAgeException extends Exception{
    InvalidAgeException(String m){
        super(m);
    }
}
class main{
    public static void age(int a) throws InvalidAgeException{
        if(a<18){
            throw new InvalidAgeException("InvalidAgeException: Age is not valid to
vote");
        }
        System.out.print("Eligible to vote");
    }
    public static void main(String args[]){
        Scanner scan=new Scanner(System.in);
        try{
            int a=scan.nextInt();
            age(a);
        }
        catch(InvalidAgeException e){
            System.out.print("Exception occurred: "+e.getMessage());
        }
        catch(InputMismatchException e){
```

```
        } } } System.out.print("An error occurred:"+e);  
    } } }
```

Status : Correct
